ATSTK600

Description:

The Atmel AVR® STK600 is a complete starter kit and development system for the AVR and AVR32 flash microcontrollers from ATMEL Corporation. It is designed to give designers a quick start to develop code on the AVR, combined with advanced features for using the starter kit to prototype and test new designs. STK600 is shipped with a ATmega2560 device board.

Socket and adapter boards are available for the whole range of AVR's, from 8- to 144-pins devices. The socket and adapter boards must be bought separately.

Visit the [STK600 Socket Package Selection Guide](#) to find the right expansion module for your device.

The [AVR Studio](#) and [AVR32 Studio](#) online-help contains the most current information and a complete list of supported devices.

Documents:

AVR079: STK600 Communication Protocol (Application Note, 61 pages, revision A, updated 04/08)
This document describes the STK@600 protocol. The firmware is distributed with AVR Studio® 4.14 or later.

STK600 Socket Package Selection Guide (Other, updated 4/08)
The STK600 Socket Package Selection site will help you find the right expansion module for your STK600 kit to start developing with your AVR device.
