1 Introduction

ROCK 4 SE is a Single Board Computer (SBC) in an ultra-small form factor that offers class-leading performance and an extensive range of expansion ports. The ROCK 4 SE offers professionals, industrial OEMs, IoT enthusiasts, hobbyists, PC DIY enthusiasts and makers a reliable and extremely capable platform for building and tinkering their ideas into reality.

ROCK 4 SE is available in 4GB LPDDR4 RAM option.

2 Features

2.1 Hardware

- Rockchip RK3399-T SoC
- Arm® big.LITTLE™ technology (Dual Cortex®-A72, frequency 1.5Ghz, quad Cortex®-A53, frequency 1.0Ghz)
- Arm Mali™ T860MP4 GPU, supporting OpenGL® ES 1.1 / 2.0 / 3.0 / 3.1 / 3.2, Vulkan® 1.0, OpenCL® 1.1 / 1.2, DirectX® 11.1.
- Dual channel 4GB 64bit LPDDR4
- Dual display via HDMI and MIPI DSI supporting mirror or extend modes
- H.265/VP9 (HEVC) hardware decode (up to 4Kp60)
2.2 Interfaces

- 802.11 b/g/n/ac Wireless LAN(WiFi 5)
- Bluetooth™ 5.0 with BLE
- 1x 3.5mm Audio Jack with mic in
- 1x SD Card
- 1x HDMI port supporting displays up to 4Kp60 resolution
- 2x USB2 HOST ports
- 1x USB3 HOST port, 1x USB3 OTG port
- 1x Gigabit Ethernet port (supports PoE with add-on PoE HAT)
- 1x camera port (2-lane MIPI CSI)
- 1x display port (2-lane MIPI DSI)
- 1x M.2 M Key (4-lane PCIe 2.1)

- 40 pin 0.1” (2.54mm) header supporting a wide range of interface options:
  - 2 x UART
  - 2 x SPI bus
  - 2 x I2C bus
  - 1 x PCM/I2S
  - 1 x SPDIF
  - 1 x PWM
  - 1 x ADC
  - 6 x GPIO
  - 2 x 5V DC power in
  - 2 x 3.3V power pin

2.3 Software

- Full implementation of the Arm architecture v8-A instruction set, Arm Neon Advanced SIMD (single instruction, multiple data) support for accelerating media and signal processing
- Debian/Ubuntu Linux support
- Android 7.1 / Android 9.0 / Android 10 / Android 11 support
- GPU enabled AI stack, (eg. Caffe)
- Hardware access / control library for Linux / Android
3 Mechanical Specification

4 Electrical Specification

4.1 Power Requirements

The ROCK 4 SE supports various power supply technologies including smart power adapter as well as fixed voltage:

- USB Type-C™ PD 2.0, 9V/2A, 12V/2A
- Qualcomm® Quick Charge™ 2.0 QC3.0/2.0 adapter, 9V/2A, 12V/1.5A
- Power adapter with fixed voltage in 6V to 12V range on the USB C power port
- 5V Power applied to the GPIO PIN 2 & 4
4.2 GPIO Voltage

5 Operating Conditions

The ROCK 4 SE has been designed to operate between 0°C to 50°C.

This temperature range was defined based on typical usage where the efficient use of Arm big.LITTLE technology can automatically select which processor core to utilise for a given task, the result of which is minimal heat generation and responsive user experience.

The ROCK 4 SE is built on a high-performance mobile chipset which is designed to operate for extended durations on batteries with efficiency at its core. As with all electronic devices heat is a by-product of operation which increases with performance and workload; during basic use cases such as web browsing, editing text or listening to music the SoC will automatically select the smallest processors available or dedicated hardware accelerators to reduce heat generation thus reserving the higher performance processors and thermal window for demanding tasks as and when required.

The SoC (RK3399-T) is specified to limit its maximum internal temperature to 80°C before throttling the clock speeds to maintain reliability within the allowed temperature range. If the ROCK 4 SE is intended to be used continuously in high performance applications, it may be necessary to use external cooling methods (for example, heat sink, fan, etc.) which will allow the SoC to continue running at maximum clock speed indefinitely below its predefined 80°C peak temperature limiter.

6 Peripherals

6.1 GPIO Interface

ROCK 4 SE offers a 40P GPIO expansion header which provides extensive compatibility with a wide range of accessories developed for the SBC market.
6.1.1 GPIO Alternate Functions

6.2 eMMC Socket

ROCK 4 SE offers a high speed eMMC socket for eMMC modules which can be used for OS and data storage. The eMMC socket is compatible with readily available industrial pinout and form factor hardware.
6.3 Camera and Display Interfaces

The ROCK 4 SE has 1x 2-lane MIPI CSI Camera and 1x 2-lane MIPI DSI Display connector. These connectors are backwards compatible with standard industrial camera and display peripherals.

6.4 USB

The ROCK 4 SE is equipped with 4 USB ports.

There are two native speed USB 2 HOST ports powered from a shared regulator which also provides power to the lower USB 3 port. The cumulative power output across these three ports is 1.44A.

The board also has two USB 3 HOST ports which are driven directly from the RK3399-T SoC which means they can also run at full native speed (5Gbps). The upper USB 3 port can be configured to OTG mode by moving the slide switch located on the underside of the board below the USB ports. Power to the upper USB 3 port is driven directly by a regulator which can provide up to 1.44A current.

6.5 HDMI

The ROCK 4 SE has 1x full-sized HDMI port, which supports CEC (Consumer Electronics Control, a feature of HDMI designed to control HDMI connected devices by using only one remote controller) and HDMI 2.0 with UHD resolution up to 4Kp60 (~3840 x 2160 px)

6.6 Audio Jack

The ROCK 4 SE supports high quality analogue audio output via a 4-ring 3.5mm headphone jack. The analog audio output can drive 32 Ohm headphones directly. The audio jack also supports microphone input as default.

6.7 M.2 Connector

The ROCK 4 SE offers a M.2 M Key connector with 4-lane PCIe 2.1 interface, providing high speed M.2 NVMe SSD expansions, M.2 SATA SSD is not supported.
7 Availability

Radxa guarantees availability of the ROCK 4 SE until at least September 2029.

8 Support

For support please see the hardware documentation section of the Radxa Wiki website and post questions to the Radxa forum.
